- User Stories..... 1
- Technology 1

Introduction

You have been tasked with developing a new system for managing the Academy CVs at QA consulting. You will implement all the features necessary to facilitate the monitoring and uploading of trainee CVs.

User Stories

Your project must implement the following user stories, you are also encouraged to add any additional stories to supplement your design.

- 1** As a trainee, I want to upload my CV so that it can be sent out by the sales department.
- 2** As a trainer, I want to find a particular trainee's CV so that I can monitor their progress.
- 3** As a user, I want to log in to the CV management System so that I can update and maintain my account.
- 4** As a Training manager, I want access to all CVs so that I can keep an eye on all of the trainees, past and present.
- 5** As a member of the soft skills team, I want to "flag" any CV that I see as inappropriate, so that it can be reviewed by the training manager.

Technology

This project should be built using Spring Boot interfaced by a REACTJS front-end and persisting to an SQL database. The project must also be fully cloud hosted and accessible via the web.
